WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A couple more weather systems will be moving through Northern California over the next 7 days. The first system is moving ashore in the far NW corner of the state today and it will spread precipitation tonight and Tuesday. Showers will be lingering Wednesday, especially for the mountains. Thursday and Friday appear likely to be dry before a stronger, wetter system arrives for the weekend. Periods of valley fog can be expected, and there may even be some (wet) thunderstorms Wednesday. Temperatures will continue to be fairly mild today and noticeably above seasonal normals in a lot of areas, but the rest of the 7 day period will see near to even below normal temperatures. Snow levels will drop to as low as 3500 feet in the north and eventually around 5000 feet in the south with both weather systems. Some gusty southerly or NW winds are likely at times with the incoming weather systems as well and will be strongest in the higher elevations where gusts of 40-50 mph are expected, mostly across the eastern mountains. Most areas are not expected to see any wind speeds of particular note.

SOUTHERN CALIFORNIA

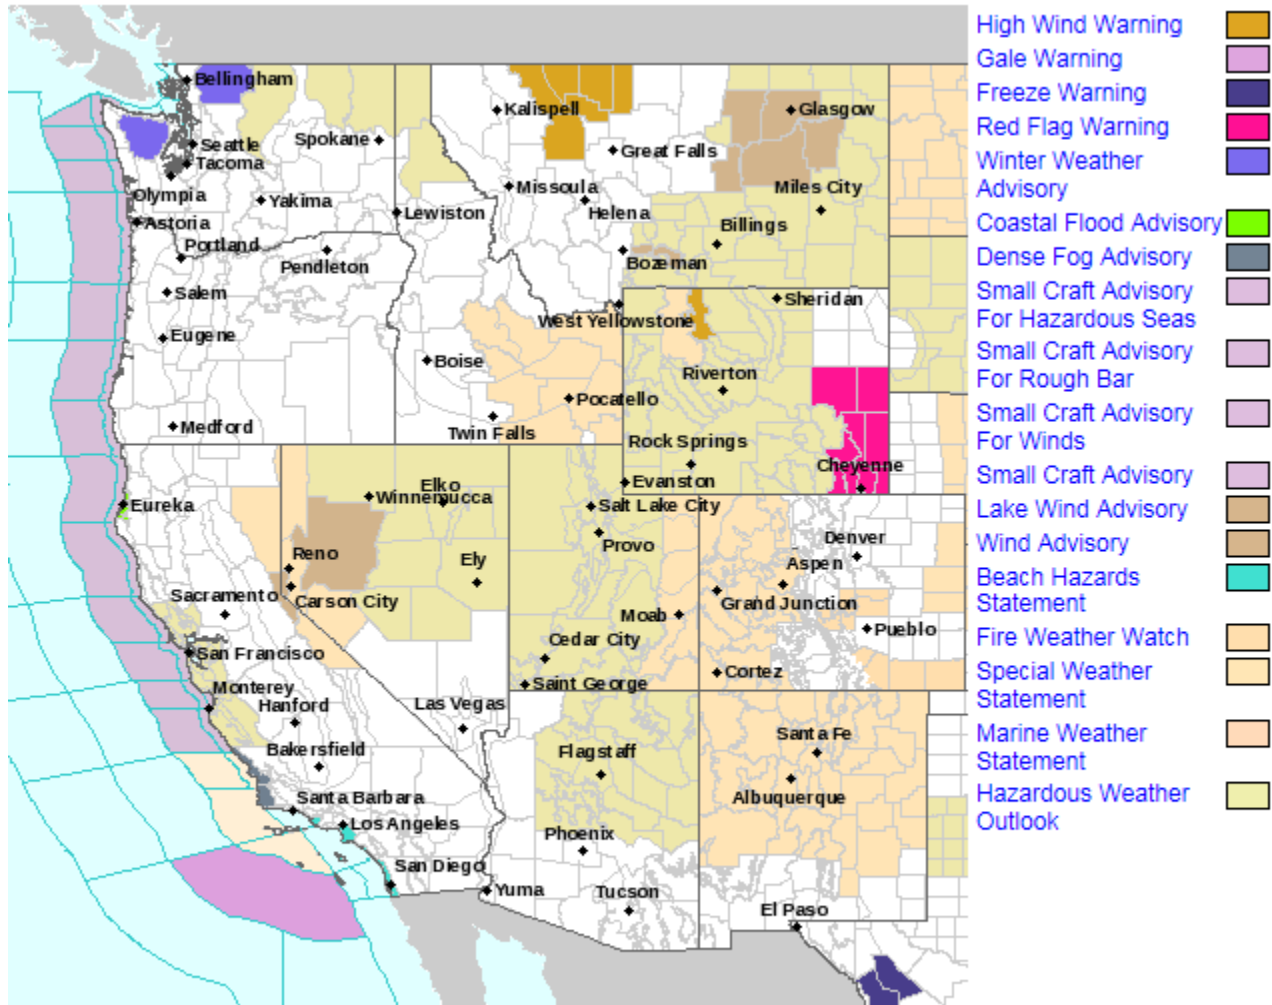

Very warm and dry through Tuesday

Strong southwest to northwest winds Wednesday morning through Thursday morning

A strong ridge of high pressure over California will bring well above normal temperatures and very low humidity to most Southern California through Tuesday. Maximum temperatures will be in the mid 60s to mid 70s across the mountains and mid 80s to mid 90s in the valleys of Southern California today. The Central California valleys will be in the mid 70s to mid 80s today. Temperatures will cool around 5 degrees Tuesday as the ridge of high pressure moves east into the Desert Southwest and a Pacific trough approaches from the northwest. Minimum humidity will be mainly in the single digits and teens away from the coastal areas and San Joaquin Valley through Tuesday. The Pacific trough will move inland across the West Coast Wednesday bringing significant cooling, with temperatures a little below normal. Northwest flow behind the trough will maintain a little below normal temperatures Thursday. This trough will also bring southwest to northwest winds of 20 to 40 mph with gusts to 60 mph to the wind prone mountain and desert areas including the Owens Valley Wednesday morning through Thursday morning. The northwest winds will also affect the South Coast of Santa Barbara and the Grapevine Wednesday afternoon through Thursday morning. Winds will decrease significantly Thursday afternoon and become light by Thursday evening. Scattered showers with less than a quarter inch of rainfall will occur across Central California Wednesday. The snow level will be around 5,000 feet. A weak ridge of high pressure will build into the region from the southwest bringing a warming trend and low humidity Friday and Saturday. Another trough will approach the West Coast on Sunday bringing a little cooling and higher humidity. Showers from this trough may move across the entire area by Sunday night or Monday morning.
